

Project Description:

The team project is to design a "Nursery" app to help new gardener buy the maintenance tools they need from online to be delivered to their home which saves time from personally going to the store. The app provides information such as plant identification, how to maintain the plants and what tools needed for gardening. Another useful app for new gardeners is "Leaf It to US" because it helps them get connected with experienced gardeners to receive guidance and feedback on their ideas. Also, allows new gardeners to follow other gardeners to have a direct conversation online and even schedule a time to meet in person. On the platform, people can share the resources they use to help each other out. Additionally, the app makes gardening a fun experience because they can share a photo of their garden as it grows and can see other's garden as well.

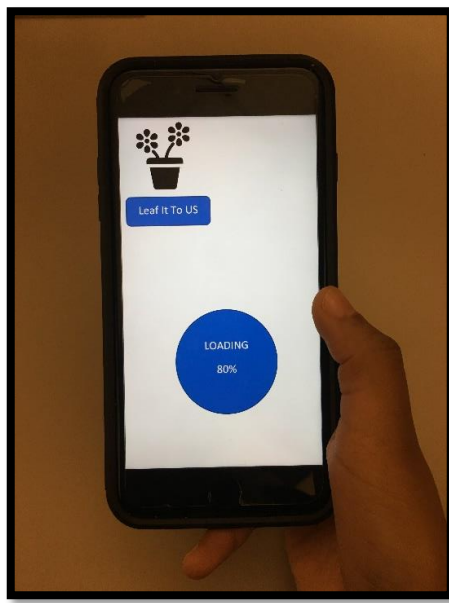

Online Nursery Sketch Storyboard

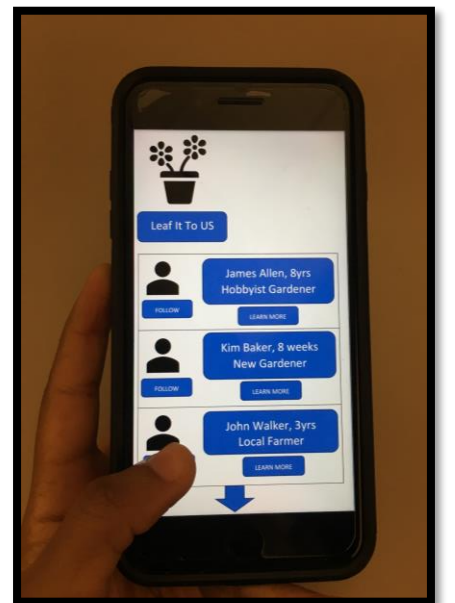

Leaf It To US App Photo Storyboard

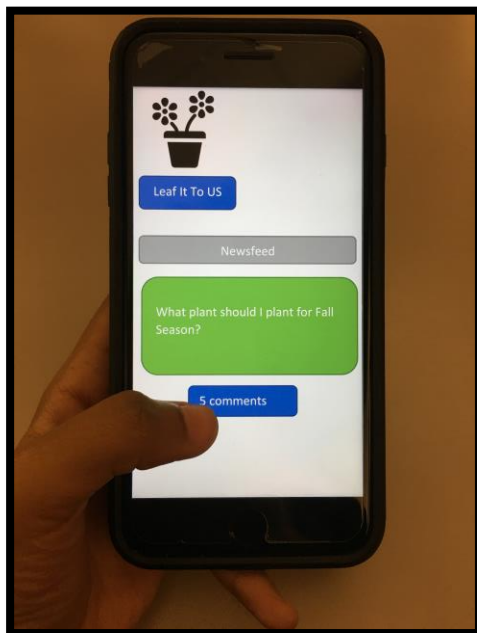

Tom doesn't know what to plant for Fall as a first-time gardener and doesn't know other gardeners.

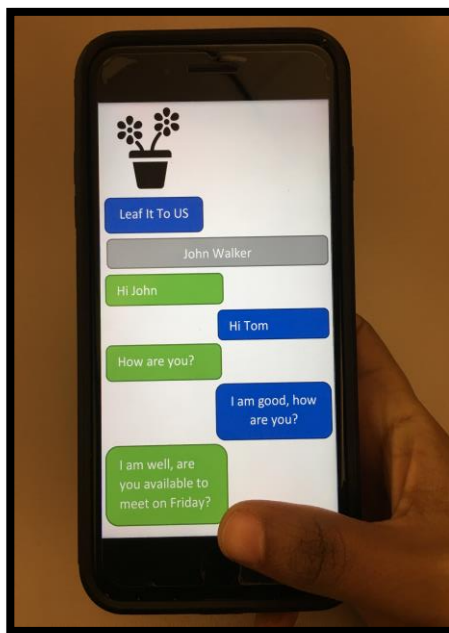

Tom found and downloaded a gardening guide app, "Leaf It to US" to join a community of gardeners online.

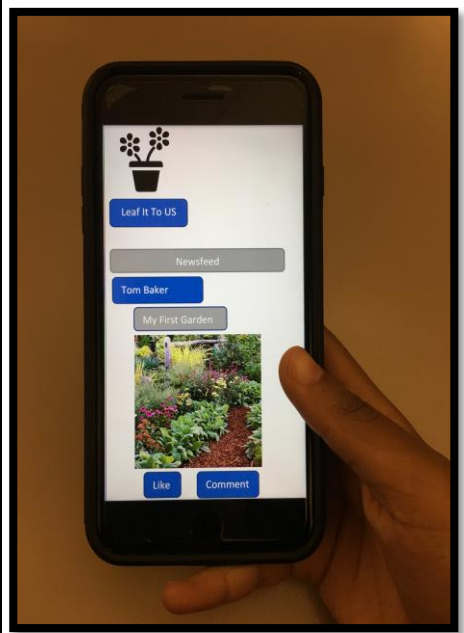

Tom followed many gardeners based on the information they provided on their profile.

Tom posts his ideas on public channel to get feedback and tips from experienced gardeners.

Tom sends a direct message to a (nearby) gardener(s) to schedule a meeting for hangout.

Tom posts a picture of his new garden to share with other gardeners.
